OPERATING PRINCIPLE

- Solenoid operated directional control valves with monitored spools are supplied with a positioning sensor monitoring the valve spool position (in case of pilot operated directional control valves, the main spool is monitored). The switching position is indicated with a binary signal.
- The valves of sizes ISO 4401-03 (CETOP 03) and ISO 4401-05 (CETOP 05) are direct operated while sizes CETOP P05, ISO 4401-07 (CETOP 07) and ISO 4401-08 (CETOP 08) are pilot operated.
- They are supplied with oil bath solenoids and only in direct current versions (see paragraph 14 for available voltages).
- These valves have no manual override, according to EN 693:2011.

2.3 - Performance limits for DS3M and DS5M solenoid valves

The curves state the flow rate functioning range according to the pressure.

The values are obtained with solenoids at a standard temperature power supplied with a voltage equal to 90% of the rated voltage. The values indicated in the graphs are relevant to the standard solenoid valve. The operating limits can be considerably reduced if a 4-way valve is used as 3-way valve with port A or B plugged or without flow.

Max piloting pressure (X port and / or Y port) NOTE 2	210	210	210

NOTE 1: minimum piloting pressure can be the lower range value at low flows rates, but with higher flow rates the higher value is needed.

NOTE 2: if the valve operates with higher pressures it is necessary to use the version with external pilot and reduced pressure. Otherwise, the valve with internal pilot and pressure reducing valve with 30 bar fixed adjustment can be ordered. Add the letter Z to the identification code to order this option (see par. 5.1).

MAXIMUM FLOW RATES		DSP5M DSP5RM		DSP7M		DSP8M

S1 - TA		150	120	300	300	600	500

6.3 - Switching times

The values indicated refer to a solenoid valve working with piloting pressure of 100 bar, with mineral oil at a temperature of 50°C, at viscosity of 36 cSt and with PA and BT connections.

The energizing and de-energizing times are obtained at the pressure variation which occurs on the lines.

DSP8M	100	70	80	50

7 - PILOTING AND DRAINAGE

These valves are available with piloting and drainage, both internal and external.

The version with external drainage allows for a higher back pressure on the outlet.

**DSP5M
DSP5RM**

DSP7M

DSP8M

7.1 - Backpressure valve incorporated on line P (C option)

DSP7M and DSP8M valves are available upon request with backpressure valve incorporated on line P. This is necessary to obtain the piloting pressure when the control valve, in rest position, has the line P connected to the T port (spools S4). The cracking pressure is of 5 bar with a minimum flow rate of 15 l/min.

In the C version the piloting is always internal.

NOTE: the backpressure valve can't be used as check valve because it doesn't assure the seal.

Add **C** to the identification code for this request (see paragraph 5.1).

For DSP7M only, the backpressure valve can be also delivered separately and it can be easily mounted on line P of the main control valve. Ask for code **0266577** to order the backpressure valve.

DSP7M

DSP8M

pilot always internal
Y: plug M6x8 for external drain

The curve refers to the pressure drop (body part only) with backpressure valve energized to which the pressure drop of the reference spool must be added. (see paragraph 6)

8 - OPTIONS: CONTROL OF THE MAIN SPOOL SHIFTING SPEED

By placing a MERS type double flow control valve between the pilot solenoid valve and the hydropiloted valve, the piloted flow rate can be controlled and therefore the change over smoothness can be varied.

Add the letter **D** to the identification code to request this device (see paragraph 5.1).

14 - ELECTRICAL FEATURES

14.1 - Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation.

The coil is fastened to the tube by a threaded ring, and can be rotated and locked to suit the available space.

NOTE 1 : In order to further reduce the emissions, use of type H connectors is recommended. These prevent voltage peaks on opening of the coil supply electrical circuit (see catalogue 49 000).

NOTE 2: The IP65 protection degree is guaranteed only with the connector correctly connected and installed.

17 - SWITCHING LOGICS

Diplomatic offers a wide range of available positions to be monitored, and for the pilot operated valve there are even monitoring with redundant signal.

17.1 - R0 monitoring

Rest (middle) position monitored with one positioning sensor.

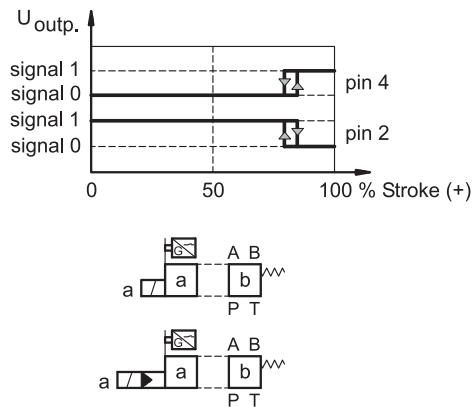

Available on both direct and pilot operated valves;
spool type S*

17.2 - MA monitoring

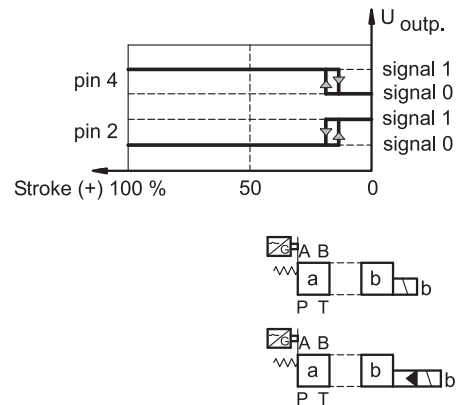

Energized position monitored with one positioning sensor.

Available on both direct and pilot operated valves;
spool type SA*, TA, TA02, TA100

De-energized position monitored with one positioning sensor.

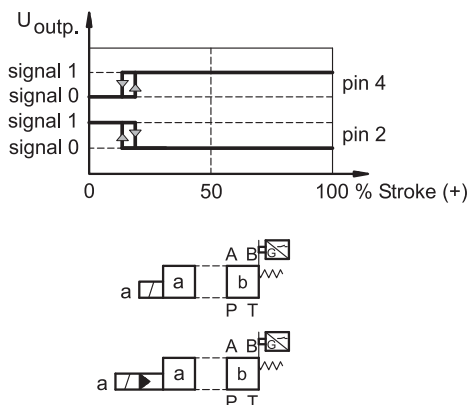

Available on both direct and pilot operated valves;
spool type SB*, TB, TB02, TB100

17.3 - MB monitoring

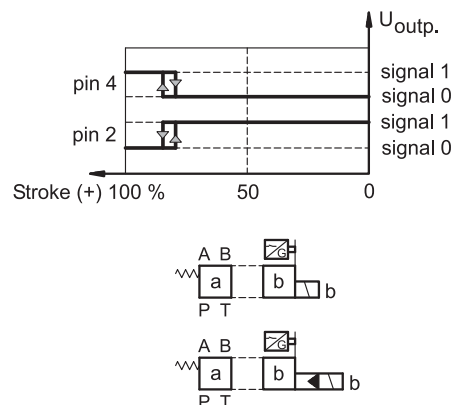

De-energized position monitored with one positioning sensor.

Available on both direct and pilot operated valves;
spool type SA*, TA, TA02, TA100

Energized position monitored with one positioning sensor.

Available on both direct and pilot operated valves;
spool type SB*, TB, TB02, TB100

17.4 - M0 monitoring

Rest (middle) position monitored by two separate positioning sensors.

Available on pilot operated valves only;
spool type S*

17.5 - MAB monitoring

Both external positions monitored by two separate positioning sensors.

Available on pilot operated valves only;
spool type S*

De-energized position monitored on side A.

Energized position monitored on side B.

Available on pilot operated valves only;
spool type SA1, TA, TA100

Energized position monitored on side A.

De-energized position monitored on side B.

Circular connector with screw locking; strain relief by means of clamping cage.

description: EC4S/M12S/10

Protection class: IP67

IEC 61076-2-101 (Ed. 1)/ IEC 60947-5-2

Conductor size: max 0.75 mm²

Cable gland: PG7 - suitable cables: 4 ÷ 6 mm²

Case material: polyamide (nylon)

Without LED.

19 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

20 - INSTALLATION

The valves can be installed in any position without impairing correct operation.

Valve fastening takes place by means of screws or tie rods, laying the valve on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing.

If the minimum values of planarity or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.
